

Haddow Construction Site Safety Plan

Objective: Ensure safety for all residents as they interact directly and indirectly with the Haddow First Place Program Site throughout multiple months of onsite development work.

Special Notice: Given this site is directly adjacent to a children's play area as well as sports fields, ensuring safety for all community residents who travel the route adjacent to Haddow Drive is imperative.

- Due to the location of this site and its proximity near children's play area and sports fields, the gates are to remain closed at all times unless access is required. This will ensure contractors and equipment will remain separated from the public thereby promoting a safer work environment for all parties.
- During all workable hours, contractors will work to ensure safety for all residents. Should large trucks over 1 ton require the need to enter or leave the site, the following must be adhered to:
 - o Contractor is to open and close the gate providing access to construction equipment while maintaining safety for all individuals on adjacent sidewalk.
 - o Contractor's representative is to have appropriate PPE for this site as outlined in our main safety plan.
 - o Signage may be required to ensure all persons clearly understand when it's safe to pass through on his/her direction.
- Construction notice signs will be placed adjacent to the sidewalk where the construction entrance intersects. This will alert individuals to construction activity.
- Special consideration is given to dust & dirt controls in the following matter:
 - o Addition of rubber curb ramps/mats - reduce dirt & gravel being transferred from the site to Haddow Drive.
 - o Street sweeping will be done on an as needed basis to reduce dust and debris along Haddow Drive.
 - o Erosion & silt fence will be installed after pre-grading and topsoil stripping

Miscellaneous Items ...

- Construction fence to be erected on site with appropriate signage of contact information and applicable safety warning signs.
- Night time security is not believed to be needed however this will be assessed when construction has commenced. This may be a requirement to ensure proper safety for all individuals who may interact with the site.
- This plan is supplemented with an area map outlining crosswalks and bus stop locations. There is a lot of activity within this neighbourhood, especially as this location is adjacent to a children's play area.

This plan has been shared through Rohit's Health and Safety Program to all consultants and contractors, City of Edmonton Sustainable Development Department, local community league and the local Councillors office associated with this project.
