

UTILITIES INFRASTRUCTURE West Jasper Place/Sherwood Bi-Weekly Project Update – April 15, 2016

The City of Edmonton is committed to providing the residents of West Jasper Place and Sherwood with regular information updates about the City's sewer rehabilitation project in your neighbourhoods. You can go to edmonton.ca/westedmontonsewer for more information or call 311 if you have a concern or comment (when you call, please identify that you are from the West Jasper Place or Sherwood communities).

In order to receive more timely updates and save paper, please consider identifying your street address and preferred email address if you would like to receive these notices electronically rather than through the mail.

Change of Working Hours for Phase 2

- Due to better than planned productivity, we have revised our construction crew working hours for the tunnel excavation portion of the project so that they finish their work by **7:00 pm instead of 11:00 pm** on weekdays and Saturdays.
- Based on the current productivity, the project will still be completed on-schedule (tunnel excavation is from March to May). We hope this will help reduce the impact of the project on the community.
- For your information, to date, the only work on Sundays has been for the surveyors to confirm the grade and alignment of the tunnel and set up the controls for the next week's work. We will try to continue having only this kind of work done on Sunday.

Temporary Air Scrubber placement east of 153 Street and 100 Avenue.

- Air Scrubber 2 (the smaller self-contained unit with the built-in silencer) will be set up on 100 Avenue, east of 153 Street (see back of page for drawing) on April 18 and start operation on April 20/21. The purpose of the scrubber is to reduce odours when construction crews connect from the pump station into the existing sewer.
- This is a temporary location, expected to last three weeks and the unit will only operate during the day — 7 a.m. to 7 p.m.
- The noise levels of Air Scrubber 2 have been measured in our construction yard (i.e. before it is installed on 100 Avenue) and the measurements show that the scrubber will not exceed the City's noise bylaw. Noise monitoring will also be done once Air Scrubber 2 is installed and starts operation.

Construction Update

Phase 1

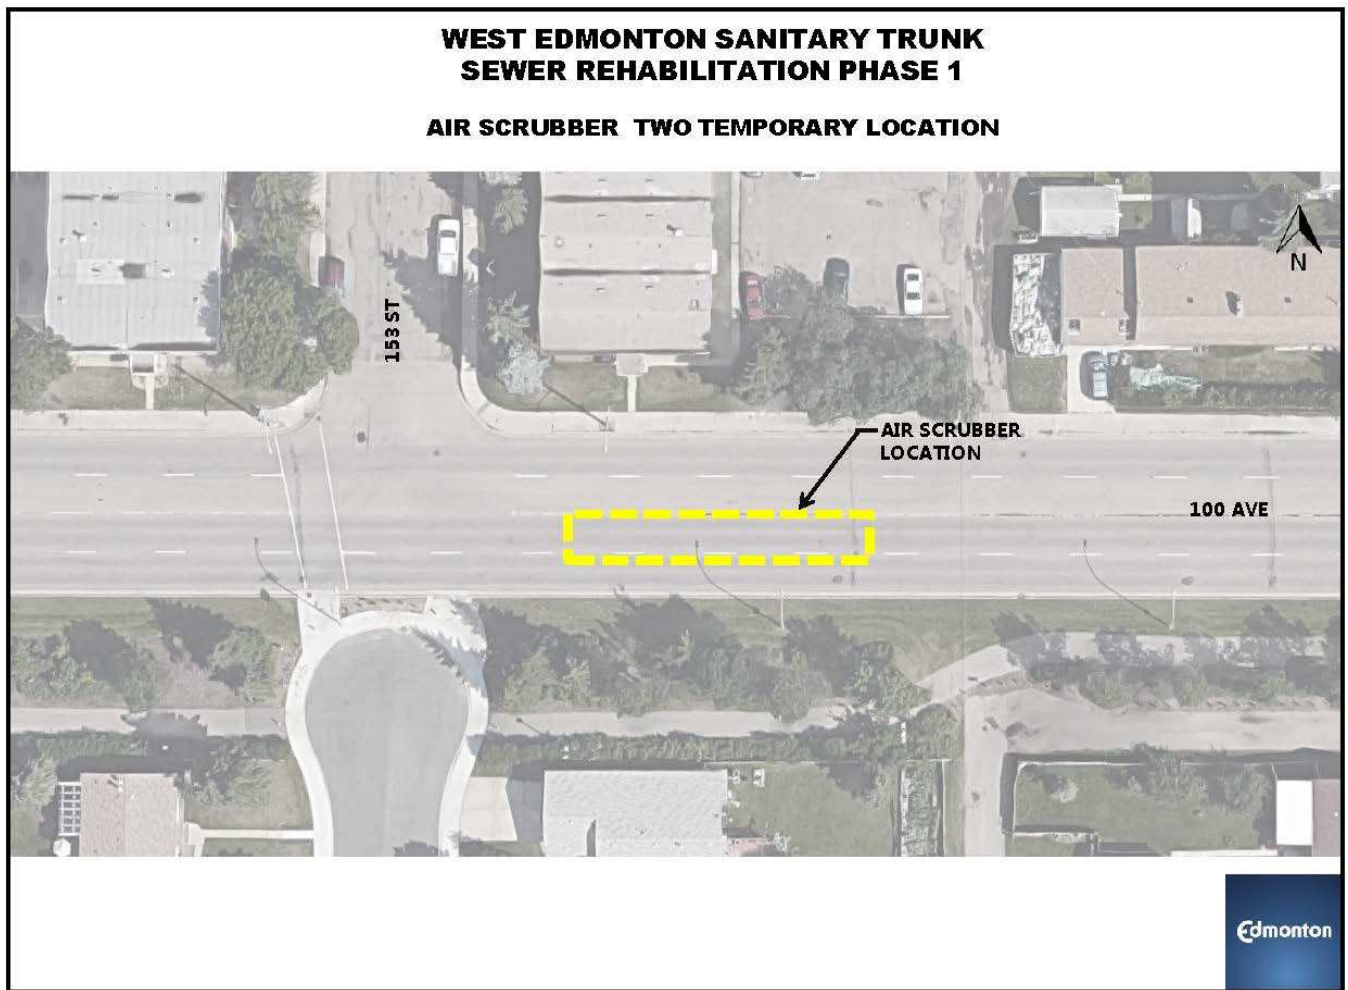

- When Air Scrubber 2 is installed on 100 Avenue, a portion of the eastbound lane between 153 and 152 Street will be closed to traffic.
- Construction of the 450-mm (18-inch) diameter sewer connection to the shaft at 100 Avenue is scheduled to start on April 14.

Phase 2

- There are no planned activities in the next few weeks which may affect traffic and pedestrian access.
- Excavation of the east and west hand tunnels is continuing.

Task Force

- Minutes from the March 4 task force meeting are now online.
