

Construction Update

SEPTEMBER 2011

FORT ROAD WIDENING

- Project is progressing well and will be completed in stages with the new northbound lanes to be completed in 2011. The construction of the southbound lanes is scheduled for completion in 2012.
- The relocation of the existing overhead lines is now complete.
- The current detour route, which currently has both north and southbound traffic sharing the west side of the road, should be lifted as of September 19, 2011. Once the east side of the road is complete, the northbound traffic will then be shifted onto this newly constructed portion.
