Welcome!

Public Involvement for Preliminary Design of SE to West LRT

Strategy

Concept

Where we are today

DESIGN PHASE

Build

Operate

Have Your Say!

Look for the colour orange and provide your input on how the LRT can best integrate into your community.
**PROJECT PURPOSE**: To develop and finalize the Preliminary Design for a 27 km urban style, low-floor light rail system along the approved corridor (route) from Mill Woods to Lewis Farms.

**Where we are today**

<table>
<thead>
<tr>

</tbody>
</table>

**Preliminary Design** means refining the City Council-approved Concept Plan (previous study) with a greater level of detail to better understand impacts and opportunities.

Preliminary Design includes:

- Structural aesthetics (visual integration of the system into the existing landscape and adjacent communities)
- LRT stop/station aesthetics
- Landscape architecture aesthetics
- Public art opportunities
- Connectivity to the existing transportation network across all modes of transportation
- Understanding the impacts to stakeholders and working together to mitigate issues where possible

**Concept**

Approved by City Council during Concept phase:

- Corridor (route) location
- Track alignment (where track fits in the road right-of-way)
- Stop/station/transit centre locations
- Low floor urban-style LRT
- Council approved
- 27 km line with 3 stations, 25 stops
- 6 bridges
  - Over North Saskatchewan River from Muttart Conservatory to Louise McKinney Park
  - Over Groat Road at 104 Avenue
  - Over 170 Street at 87 Avenue
  - Over Anthony Henday at Webber Greens Drive
  - Over Whitemud Drive at 75 Street
  - Over CN/CP rail lines along 75 Street
- 1 pedestrian bridge at Connors Hill
- 1 tunnel between Louise McKinney Park and 102 Avenue
- 2 Park ‘n’ Ride sites
- 3 Kiss ‘n’ Ride sites (other sites being considered)
- Integration with 5 transit centres
- 1 Operation and Maintenance Facility
Edmonton’s Low Floor Urban Style LRT

- Urban style - City Council’s direction for expansion of existing LRT system and new lines (June 2009)
- Benefits of urban style
  - Improves connections between LRT and community
  - Smaller scale stations/stops, spaced closer together
  - Less visual impact - stops are at street level
  - Less impact on community
  - LRT operates with flow of traffic in its own right-of-way using regular traffic signals (does not have full priority), separated by a curb
  - Fewer barriers
  - Reduced speeds in congested areas to support safe pedestrian oriented communities
  - Encourages pedestrian access
  - Pedestrian crossings at signalized intersections
  - Better links to destinations with more bus, pedestrian and cyclist connections
  - Bike parking at all LRT stops/stations
  - Bus network modified to ensure integrated transit network
  - Investment in landscaping, streetscaping and architectural features to improve visual appeal, where possible
  - Openness of space maximized to create safe environment using Crime Prevention through Environmental Design (CPTED) principles
5 Stages of Public Involvement

Stage 1: **Pre-Consultation:** Developing the public involvement process,

Feb. 2012

Stage 2: **Initiation:** Envisioning the look, feel and integration of LRT in your community

Mar. - May 2012

Stage 3: **Consultation:** Developing the look, feel and integration of LRT in your community

May - Nov. 2012

Stage 4: **Refinement:** Refining the look, feel and integration of LRT in your community

Sept. - June 2013

Stage 5: **Conclusion:** Presenting the final recommended Preliminary Design—the look, feel and integration of LRT in your community

Jan. - Dec. 2013
Thanks for Getting Involved!

Thousands of comments were received during public involvement Stage 2: (March to May 2012):
• Public meeting discussions
• Comment forms
• Online survey
• Letters and emails

Input is being used to inform Preliminary Design and has been incorporated into materials presented tonight

How your input is used:

Your input is valuable and used along with other information to inform the project.
Area 6: What We Heard from Stage 2

What We Heard

Infrastructure, Overall Design, Art
- Consider elevation/sightlines of elevated LRT bridges (guideways) from resident perspective
- Consider need for noise barriers
- Incorporate art into functional elements/design, not stand alone
- Integrate sidewalks and bike paths
- Integrate LRT with bus service
- Bike racks/lockers at all stations
- Provision of bike parking is important
- Widen sidewalks to multi-use trails, where possible

Stops
- Historical feel
- No plain concrete: colour is preferred
- Paving stones
- Timeless design and materials
- Traditional looking shelters

Other
- Increase in density (transit oriented development) is a concern
- Increased traffic congestion is a concern
- Safety and security should be priorities
- Lack of Park ‘N’ Ride facilities/parking in residential neighbourhoods is a concern
Approved Concept Plan Amendment

Original Concept Plan (2011)

Approved Amendment to Concept Plan (July 2012)

- Amendment approved by City Council July 2012:
  - Whitemud stop removed
  - Wagner stop changed to elevated station and Park 'n' Ride
  - Operations and Maintenance Facility moved South of 51 Avenue
Thanks for Getting Involved!

What kind of feedback are we looking for?

- Look/feel of stop/station (landscape architecture, colours, treatment, public art)
- Important connections/access points
- Confirmation of how amenities will look

What kind of feedback are we unable to use?

- Comments about decisions made in Concept Planning (route, stop/station locations, vehicle technology)
- Comments about elements that cannot be addressed until later stages of project
- Comments regarding elements outside of the scope of project
• All major building structures related to SE to West LRT will be built to Leadership in Energy and Environmental Design (LEED) silver standard per the City of Edmonton’s Green Building Plan and Policy C532, resulting in reduced energy use and significant cost savings. LEED is most recognized and accepted North American standard for rating environmental friendliness of design, construction, operation and sustainability of buildings.

• As of the 2006 Federal Census, more than 75% of journey to work trips in the Edmonton Region are made by driving alone.

• Significant environmental studies being conducted and include assessments of rare plants, bird and wildlife habitats, animal corridors, groundwater and the North Saskatchewan River.

• Noise and vibration studies conducted in potentially affected areas along route including residential, commercial, and industrial areas as well as in the Winspear Centre for Music and Citadel Theatre areas.

• The City of Edmonton’s Corporate Tree Management policy is referenced to aid in determining value of trees and how value is replaced, if required.

• 32 individual disciplines bring LRT expertise from around the world to the Preliminary Design project, including:
  • Civil, structural, electrical, rail and geotechnical engineers
  • Landscape architects
  • Environmental scientists
  • Biologists
  • Botanists
  • Wildlife experts
  • Urban designers
  • Transportation planners
  • Architects
  • Urban Planners
  • Finance experts
Stop Elements

Standardized Elements: These elements are a part of every stop.

Have Your Say: How might these stop/station elements look in order to integrate with your neighbourhood? See “Stop Option” boards.
Stop Layouts

- Stop types (Centre or Side) were determined in the approved Concept Plan.
- Centre loading
- Side loading

- All layouts and scale to be confirmed as design progresses, based on ridership projections
Shelter Canopies

Organic form that recalls the river and natural history of the area.

Materials:
- Steel structure
- Metal and wood canopy
- Glass shelters
- Unique concrete finishing on platform

Angular form found throughout Edmonton that is compatible with both residential and commercial buildings.

Materials:
- Steel structure
- Metal and wood or glass canopy
- Glass shelters
- Unique concrete finishing on platform

Simple, light, form that will blend into all character zones by with its transparency and lightness.

Materials:
- Steel structure
- Translucent glass or wood canopy
- Glass shelters
- Unique concrete finishing on platform

Have Your Say: Which canopy do you prefer?
PARK ‘N’ RIDE
Car park connected to transit station that allows commuters to leave vehicles and transfer to bus or LRT.

KISS ‘N’ RIDE
A place where commuters are driven and dropped off at a bus or LRT stop/station. Other Kiss ‘N’ Ride locations are being determined.

TRANSIT CENTRE
A stopping point for bus and LRT where commuters can move from one transit mode to the other.
Priority is to locate substations on City property

- The purpose of the traction power substation is to convert and regulate power to the LRT vehicle
- TPSS must be located approximately every 1 km (0.62 mile) along the corridor
- Some locations will receive pre-manufactured units, other locations may require traction power substations to be built in place
- See Corridor Access Plan for approximate locations
Examples of potential TPSS screening

- Screening (fencing, walls) will blend with neighbourhood aesthetic
- Landscaping will further screen site
Overhead catenary poles provide power to the LRT vehicle. They are either located in the centre or on the side of the route. This location is determined by the space available and technical requirements.

Examples of potential catenary poles
Noise modeling is being conducted in keeping with the City’s Urban Traffic Noise Policy along the LRT corridor.

City of Edmonton Urban Traffic Noise Policy (UTNP)
- City seeks to achieve a projected attenuated noise level below 65 dBA Leq24 (traffic noise over a 24 hour period)
- If predicted noise level is 65 dBA Leq24 or greater, a noise barrier may be provided

Traffic Noise Measurement
- Traffic noise levels are measured in decibels (dBA) over several days and averaged for 24 hour period (Leq24)

Noise Modeling
- Projected volumes based on proposed lane configurations, addition of LRT and future traffic growth
  - Assess projected noise levels against the UTNP
  - Based on 2044 figures—a horizon year used throughout the project
  - Review of noise assessment from Concept Plan is ongoing

Vibration could occur during LRT construction and operation
LRT runs on a continuous welded rail, a technology that minimizes vibration during operation
A complete vibration screening of the SE to West corridor (route) is being conducted as part of Preliminary Design
Vibration screening is based on the US Federal Transit Administration (FTA) screening process
Corridor Wide Assessment is ongoing
  - Screening based on general vibration assessment
  - Accounts for train type, speed, distance from track
  - Screens out residences not affected by vibration
  - Identifies areas that may be affected
Detailed Vibration Assessment
  - Includes site specific vibration measurements
  - Conducted at Winspear Centre for Music and Citadel Theatre areas (acoustic sensitivities)
  - Recommendations to reduce vibration during LRT operations will be provided if warranted
  - Pre-construction assessments of structures and houses abutting the LRT route may be completed
Environmental Site Assessments
- Determine if contaminated sites or potentially hazardous materials will be encountered during construction
- Includes soil and groundwater studies
- Assist in providing for safety of construction workers, public and environment

Environmental Impact Assessment
- Required by Edmonton’s North Saskatchewan River Valley Area Redevelopment Plan (Bylaw 7188) and may be required by Canadian Environmental Assessment Act 2012
- Includes describing soils, water quality, water courses, wildlife, vegetation, rare species, natural areas, ecological connectivity, archaeological, paleontological and socioeconomic resources in the vicinity of LRT and assessing impacts of construction and operation
- Investigations will include effects of noise, dust and vibrations on local community assets
- Information will be used to:
  - Inform design and construction
  - Obtain required approvals from other jurisdictions such as Fisheries and Oceans Canada and Transport Canada

Natural Area Assessment and Management Plan
- For all natural areas impacted by the project

Geotechnical Studies
- Assess ground conditions to determine suitability for construction
- Provide design advice on stability of slopes for foundations, tunnels, chambers and other structures
Public Art

- Public art is considered to be a key component to attractiveness and identity of city
- Public art demonstrates:
  - Character of communities
  - Investment in the arts
- Public art strengthens local economy
- Support for arts is a reflection of a progressive municipality
- The City dedicates 1% of qualifying construction budgets to public art
  - Program operated by Edmonton Arts Council
  - Approved public art will be displayed within or in close proximity to publicly accessible municipal property
- Input received during Preliminary Design regarding public art will be provided to the Edmonton Arts Council
- Through the Edmonton Arts Council, the public has an opportunity to:
  - Help select an artist to provide art along LRT corridor (route)—typically at stations
  - Potentially provide ideas for artist’s consideration

*Integrated public art at transit stops.*
North Saskatchewan River Bridge

- The new LRT bridge to be built on the existing pedestrian bridge alignment.
- New LRT bridge to incorporate new pedestrian and bicycle facilities under the bridge deck.
- Existing pedestrian bridge to be demolished prior to new LRT bridge construction.
- During construction, pedestrians and bicyclists will be detoured to Low Level Bridge.
- The project team assessed the feasibility of maintaining the existing pedestrian bridge during construction. Due to increased environmental impact on the River and proximity to existing residential development, this option is not being pursued.
North Saskatchewan River Bridge

Misericordia Hospital Station

- Elevated stations are required where the rail is on a bridge at Misericordia Hospital and West Edmonton Mall stations
- The Misericordia Hospital station will provide barrier-free access to Misericordia Hospital and surrounding community
- Preliminary design of stations is ongoing

Roof options at Misericordia Hospital station

Option 1
- Simple roof form respects the tree line and the hospital

Option 2
- Minimize south side heat gain
- Maximize exposure to northern light

Option 3
- Minimize south side heat gain
- Maximize exposure to northern light

Example of an elevated station:
Sunalta station, Calgary, AB
Your Stage 2 comments provided direction for this stop theme

“A nice integration of modern and light.”

Design Theme: What We Heard from Stage 2

Preliminary design is ongoing. Refer to Misericordia Hospital Stop boards for options.
Have Your Say:
This design theme is based on your input from Stage 2. Which elements best reflect your neighbourhood?
Bridge over 170 Street

Concept for elevated LRT bridges in West Edmonton

- Bridge connects Misericordia Hospital and West Edmonton Mall elevated stations
- Bridge required to clear 170th Street, which is part of the City’s Interior Ring Road
- Bridge is for LRT only; pedestrian connections are at street level
- Approximately 1.6km in length
- Preliminary design is ongoing
West Edmonton Mall Station Plan
