**Schedule Guide**

**Reading the Schedule**

To find the estimated times that a bus stops at a particular location, read down the column under that destination.

To find the estimated times that a particular bus will stop at other locations, read across the row (left to right).

Reading across the row you look for the time required to get to the destination.

Reading down the column you read the estimated times.

**Example**

For the schedule times to arrive at 5:23 A. M. 

Begin at Column 6.

Find the row by looking across the columns and read the row (left to right).

Subtract the start time (5:23 A. M.) from the estimated time of arrival.

5:23 A. M. - 5:23 A. M. = 0:00 A. M.

0:00 A. M. is the accurate arrival time.
