

MANNING DRIVE SAFETY REVIEW

OCTOBER 2015

Manning Drive Safety Review 18 Street NW and Highway 28A (17 Street NE) About the Project

Manning Drive is an important commuter and goods movement corridor for the northeast area of the City providing a connection to Fort Saskatchewan, Gibbons and Alberta's Industrial Heartland. Manning Drive (Highway 15) is part of the Regional Highway System under Provincial jurisdiction. This area of the City will experience significant growth over the next few years, through the development of the Horse Hill area and the Edmonton Energy and Technology Park (EETP). This future growth will necessitate ultimate upgrades to the Manning Drive corridor to achieve a fully free-flow corridor with access provided through interchanges at Meridian Street (1 Street) and at Highway 28A, in the long term. A flyover will also be constructed in the future at the current intersection location of 18 Street and Manning Drive (Highway 15), once alternate access to the area is established.

Study Purpose

The City of Edmonton is currently undertaking a safety and operational review of the intersections of Manning Drive (Highway 15) at 18 Street NW and at Highway 28A (17 Street NE). The purpose of this study is to identify and confirm traffic issues and concerns to determine what interim measures will improve road safety and operations over the next several years, until the ultimate interchanges are constructed.

Public Involvement

The City of Edmonton would like to hear from road users and residents adjacent to this section of Manning Drive (Highway 15) about their experience with these intersections. Input will be received in a number of ways including an Information Session and an online survey.

Next Steps

This safety review is scheduled to be complete by November 2015. The recommendations will be used to improve the safety of intersections and accommodate growth in the area in the short term. The recommendations will also be presented to Alberta Transportation for discussion, as Manning Drive is within the Province of Alberta Highway Network.

Survey

A survey to gather public input will be available online, at the following location, from October 15 through October 30, 2015:
