CONSTRUCTION UPDATE

Valley Line West LRT - Utility Relocations
102 Avenue - 103 Street to 107 Street
JULY 2020

PROJECT UPDATE

Installation of the underground electrical infrastructure is taking longer than anticipated due to rainy conditions, particularly as it relates to any concrete work. We recognize this work is impactful and continue to make every effort to limit disruptions to the area. Installation of the underground infrastructure is expected to be completed by the end of August with the exception of work associated with Work Area #4. This work is expected to be completed by the end of September. Updates to each work area are provided below. The red lines on the maps show the locations of the construction activities. If wet weather persists or we face other delays, you will be notified of new timelines.

WORK AREA #1: 102 AVENUE FROM 105 STREET TO 106 STREET

UPDATE: Work began in April and is scheduled to be completed by the end of July.

The majority of work has been completed and we expect to reopen this section of 102 Avenue soon. Minor work in the area will continue until the end of July.
WORK AREA #2: 102 AVENUE FROM 106 STREET TO 107 STREET

UPDATE: Work began in April and is scheduled to be completed by the end of August.

Lane, sidewalk, and bike lane closures and/or reductions will remain in place until construction is complete. Temporary solutions are in place to maintain pedestrian access, wherever possible.

WORK AREA #3: 102 AVENUE FROM 103 STREET TO 105 STREET

UPDATE: Work began in early June and is expected to be completed by the end of August.

Lane, sidewalk, and bike lane closures and/or reductions will remain in place until construction is complete. Temporary solutions are in place to maintain pedestrian access, wherever possible.
WORK AREA #4: 102 AVENUE & 103 STREET

A separate project to replace a transformer will get underway soon to coincide with ongoing work associated with LRT utility relocates. This project will ensure the safe, reliable delivery of power to this area. Work is expected to start on July 20 and continue until mid-September.

EPCOR will work around the intersection of 102 Avenue and 103 Street to install new underground infrastructure. During this time, street parking will be restricted in the areas marked in red on the map.

To minimize impacts to the area, some of the work will be done overnight. From July 20 to July 23, the sidewalk will be completely closed and street parking will be restricted in both locations marked on the map from 8:00 p.m. to 5:00 a.m. Signage will be used to detour pedestrians around the worksite.

Once the overnight work is complete, typical hours of construction will be 9:00 a.m. to 3:00 p.m. Monday to Friday. Power outages will not be required to complete the work. Additional work will be required after the transformer has been installed in the area marked in red along 102 Avenue. We will provide you with an update on this work once details are finalized.

WORK AREA #5: 105 STREET FROM 102 AVENUE TO 103 AVENUE

UPDATE: Work began at the end of May and is expected to be completed by the end of July.

The underground infrastructure has been installed; however, to mitigate traffic impacts south of 102 Avenue, the northbound curb lane on 105 Street north of 102 Avenue will remain closed until the end of July.
