

ADVISE

Grandview Heights River Valley **Stairs** Rehabilitation

The Grandview Heights stairs are part of the City's river valley stairs program that include four other sets of stairs. The Grandview Heights stairs have been designed using a similar design for consistency amongst all five stairs.

What Has Already Been Decided

- + **LOCATION** - The stairs will be re-built in the same location.
- + **STYLE** - The stairs will be re-built in a similar style that currently exists.
- + **PITCH/SLOPE** - The pitch/slope will be the same.
- + **WIDTH** - The stairs will be approximately 20% wider. The goal is to fit three people across.
- + **TREAD/RUN** (the horizontal portion of the stairs that people walk/run on) - Current City standards are 12" to 16". The tread/run of the stairs will be consistent and will meet these standards.

- + **RISE** (the distance between stairs vertically) - Current City standards are 6" to 8". The rise of the stairs will be consistent and will meet these standards.

What Needs To Be Decided

- + **NUMBER OF LANDINGS** - The two concept designs designate a different number of landings in each design.
