

2018 Pest Management Programs

The City of Edmonton's weed and pest management programs will begin April 3 (weather depending) and will run until the end of October. This may include the use of pesticides (e.g. herbicides, rodenticides and insecticides) only as a last resort. Alternative techniques, products and biological controls are used whenever possible to reduce pesticide use.

All pest control products and procedures used meet strict standards established by Health Canada through the Pest Control Products Act. City of Edmonton's pesticide applicators are trained in accordance to standards of Alberta Environment and Parks.
