

Safety improvements are coming to Wagner Road!

The **Towards 40 program** is focused on improving road safety in areas where speeding and safety issues have been identified. It encourages safe driving habits and increases speed limit compliance.

The City will be installing adaptable measures to improve safety along **Wagner Road** based on the data collected and feedback received during public engagement.

The installation of the **adaptable measures**, which include **adaptable curb extensions and signage**, is scheduled to occur in **September** and continue throughout the construction season, weather dependent.

While the roadway will be accessible during installations, please anticipate some impacts such as noise due to construction and temporary delays when there are work crews on site. Please follow any signage or site instructions, such as no-parking signage and directions from work crews in the area.

For an overview of this project and to view the **final design** and **What We Decided Report**, scan the QR code or visit edmonton.ca/Towards40.

What's next?

After the installation, there will be a period of time for those using the road to adjust to the changes while the City collects traffic data.

Feedback from schools, businesses and other road users will be gathered through 311 and used with technical data to assess if adjustments are needed.

Questions? Call 311 or email saferoads@edmonton.ca
