

Subject: Fuel/Used Oil Delivery and/or Removal from Storage Tanks

To Whom it May Concern:

This letter is to serve as a reminder that confirmation of PTMAA registration is required for any storage tank where fuel delivery or fuel/used oil removal is being conducted by your company. This applies to aboveground storage tanks that are $\geq 2500\text{L}$ and any underground storage tank. This is to ensure the tank and the installation are compliant with the 2019 National Fire Code – Alberta Edition.

The 2019 National Fire Code – Alberta Edition Div B 4.3.1.9(2) states:

Except for storage tanks being withdrawn from service in accordance with Subsections 4.3.15 and 4.3.16., no person shall deliver or remove flammable liquids or combustible liquids to or from a storage tank, unless

- a) The storage tank is registered in accordance with Article 2.2.5.2 of Division C, and
- b) The registration certificate is displayed as required by Sentence 2.2.5.2.(5) of Division C.

The owner is required to have documentation on site showing that the tank is registered, and that the registration is current. Please ensure the owner provides this documentation if it is not readily visible.

It is a violation of The Safety Codes Act to contravene the above, and if deemed appropriate charges can occur under The Safety Codes Act.
