

District Planning at a Glance 6/6 Project Integration

Cities are complex. They work best when interdependent systems like land use, transportation, and growth management are integrated. [The City Plan](#) is our vision for how and where we want our city to grow. To bring our future vision to life, we will guide the evolution of our city through three systems and a number of complementary initiatives:

- The **Planning and Design System** helps us shape the geographic space of our city. District Planning is one of the networks in this system.
 - The [City Planning Framework](#) complements District Planning by ensuring they are kept up-to-date, that new planning tools are focused, and by ensuring planning tools that have served their purpose are repealed.
 - The [Zoning Bylaw Renewal Initiative](#) is a comprehensive overhaul of Edmonton's current Zoning Bylaw that includes rethinking how, what and why the City regulates development and zoning. It will result in a strategic, simplified and streamlined Zoning Bylaw, enabling all people, places and businesses to thrive and prosper. District plans will serve as the policy link between *The City Plan* and regulation contained in the Zoning Bylaw.
- The **Mobility System** shapes multi-modal transportation for people and goods to move safely.
 - The [Mobility Network Assessment](#) will help identify potential investments that best support the evolution of the mobility system towards the vision in *The City Plan*.
- The **Managing Growth System** shapes how and where our city will grow and change over time.
 - The [Growth Management Framework](#) will support financially efficient and compact city building in priority growth areas using a variety of tools, including policy, incentives, infrastructure investment and partnerships.
