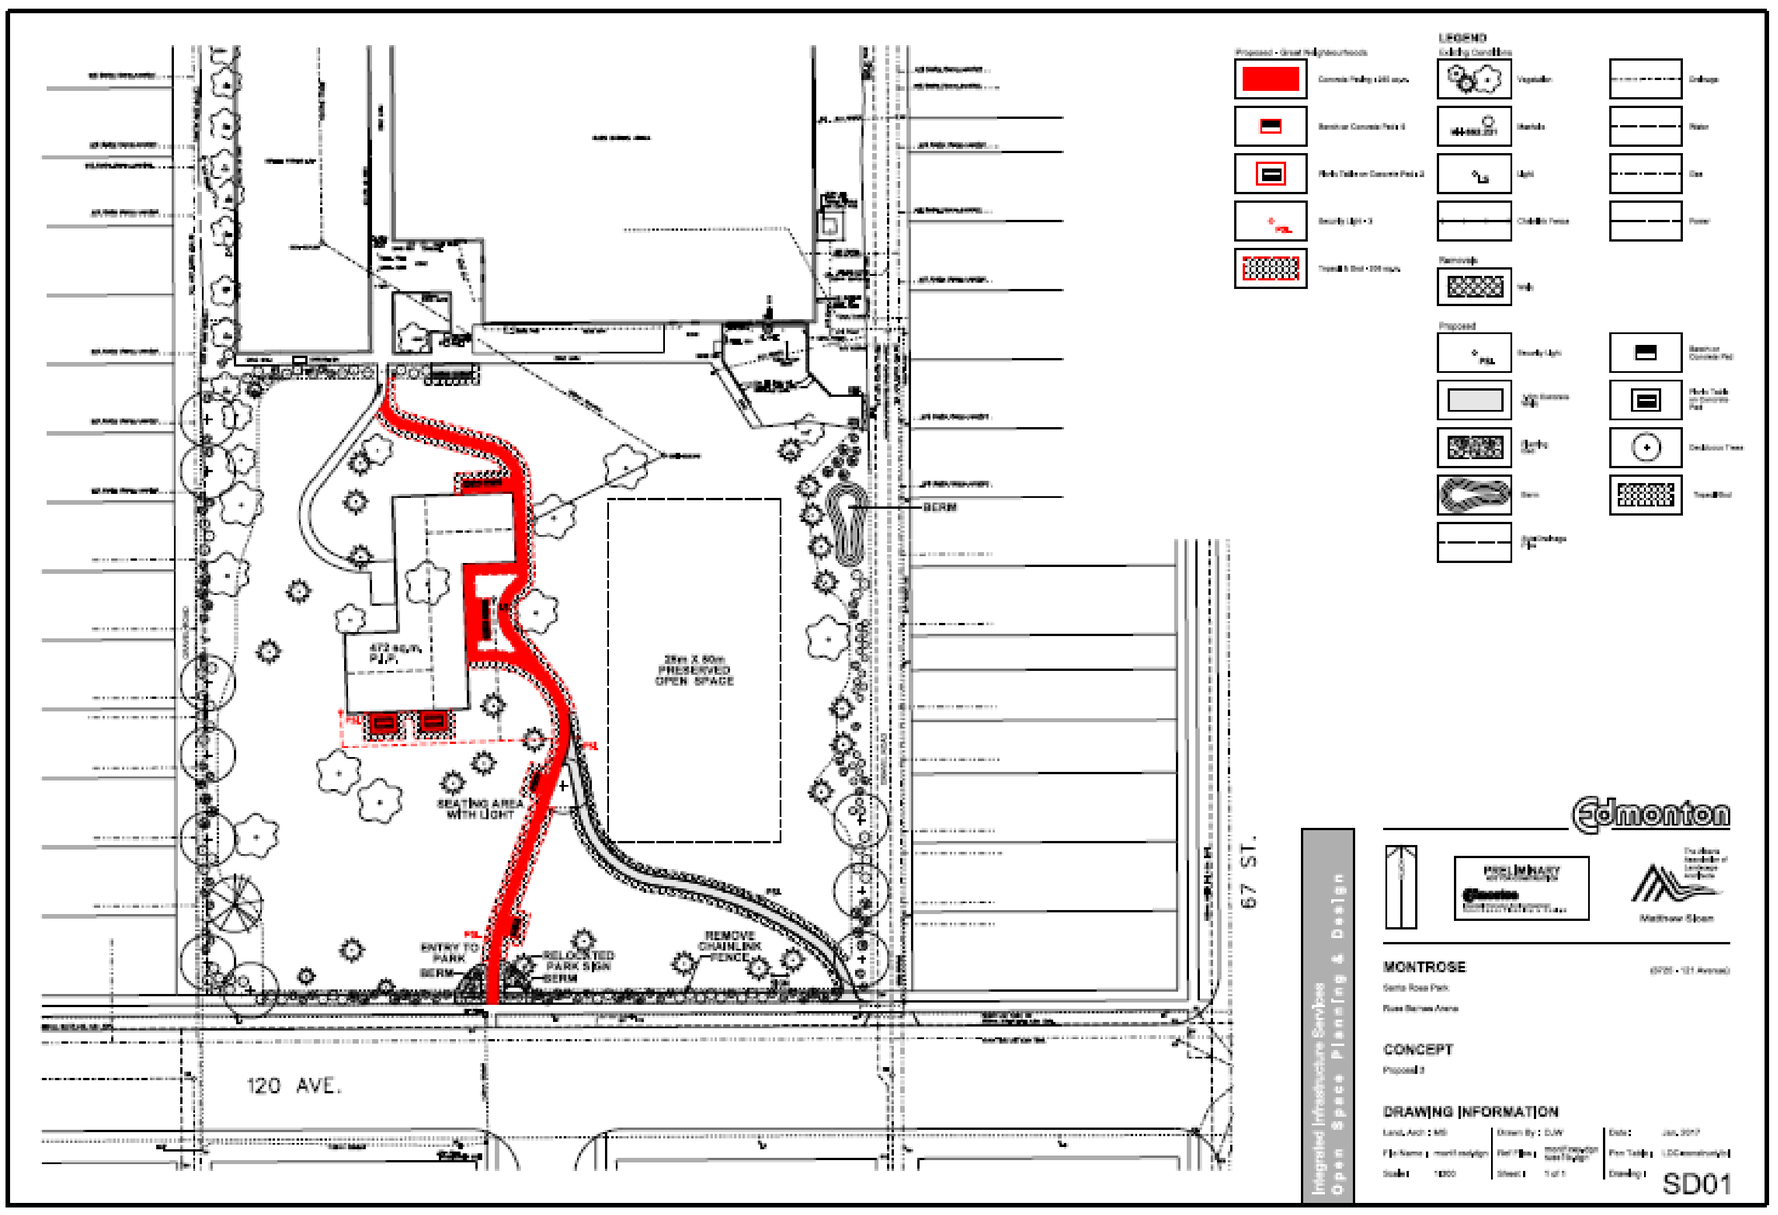
Building Great Neighbourhoods

Montrose

We have heard comments from previous Montrose meetings on formalizing a pathway along the berm that runs along Yellowhead trail. The proposed 3 meter asphalt pathway would have lighting installed and run from 66 street to 50 street, tying into the intersections and the current shared use path on 50 street.

This project is currently in the concept phase and would be adjacent to both Montrose and Newton neighbourhoods. If the project is supported through additional consultation and project reviews, the timeline for construction would align with the Newton Neighbourhood Renewal construction timelines.



The City will create a north-south pedestrian connection through Santa Rosa park to the marked crossing on 120 Avenue, with lighting and furniture amenities as shown in red.
