How can you help
to beautify our city.

THE CITY OF
Edmonton

Tree Replacement Program

City of Edmonton Parks continues to monitor the health of Edmonton's trees for drought stress symptoms and pest infestation. Parks makes every effort to save these trees through watering, fertilizing, and pest management programs. Unfortunately, some drought stressed and pest infested trees do not survive. Parks will remove trees that are beyond recovery and replace them as quickly as possible.

The City's tree replacement program concentrates on these areas:

- Boulevards
- Parks
- Roadways

Planting on City Property

Yes, you can plant on City property! However, approval is necessary to ensure that trees planted on City property are a suitable species, placed in proper locations, and sufficiently spaced apart to minimize future maintenance. Approval is also required to ensure the planting location is free of underground and overhead utilities and is not in an area designated for future municipal development.

For more information on obtaining approval to plant, please call 311 or visit edmonton.ca/tree

Remember:

All trees or shrubs planted on City land become the property of the City of Edmonton.

Landscaping on Boulevards

Landscaping near or around existing boulevard trees requires special care. Many landscaping changes can negatively affect the health of the tree.

Please contact the City before doing any construction or landscaping around City trees so we can ensure the continued good health of our trees.

Caring for Trees

The City would like to express our gratitude to residents who water and preserve Edmonton's trees. City residents are encouraged to contribute to the health, vitality, and survival of boulevard trees by supplementing the City's watering program. Details on how to water effectively are available on the City's website or you can call 311 for information.
