

Construction Notice – Full Closure of Saddleback Road West and 19 Avenue Lane Closures

Soon after 12 Avenue west has fully reopened, Leducor will implement a full closure of Saddleback Road west of 111 Street, anticipated to start sometime in August. This closure is necessary for critical removals, civil drainage, ductbank and utility work, roadwork and trackwork. The closure is expected to last approximately **10 weeks**.

Before the full closure, **starting on/around July 18**, minor lane closures will occur on both sides of 111 Street on Saddleback Road and 19 Avenue to begin preparatory work. This will reduce eastbound and westbound traffic lanes. Northbound and southbound turning lanes onto 111 Street will still be maintained. This traffic configuration will be in place for approximately **one month**.

Following the reopening of Saddleback Road (~October), **there will be additional minor lane closures on both sides of 111 Street on Saddleback Road and 19 Avenue** to finish the remaining necessary removals and roadwork.

Further details about the Saddleback Road full closure, including the tentative start date, will be shared in a follow-up notice.

During the Saddleback Road full closure, motorists to and from the Skyrattler community west of 111 Street will be **detoured to 23 Avenue**. Below are details of this closure and mitigation measures.

- The Traffic Operations team will continue to monitor conditions and adjust signal timing or signage where possible.
- Crews will work extended hours and overnight when necessary to complete the work as quickly and safely as possible.
- By completing these closures along 111 Street in 2026, the vast majority of critical work can be finalized at each intersection in the shortest possible time, minimizing the remaining work in future years. **Following this construction season, Leducor does not anticipate any further full closures in the area.**
- We know the closure of Saddleback Road west of 111 Street will be challenging for residents, businesses, and commuters. Ongoing coordination and communication with the community will continue.

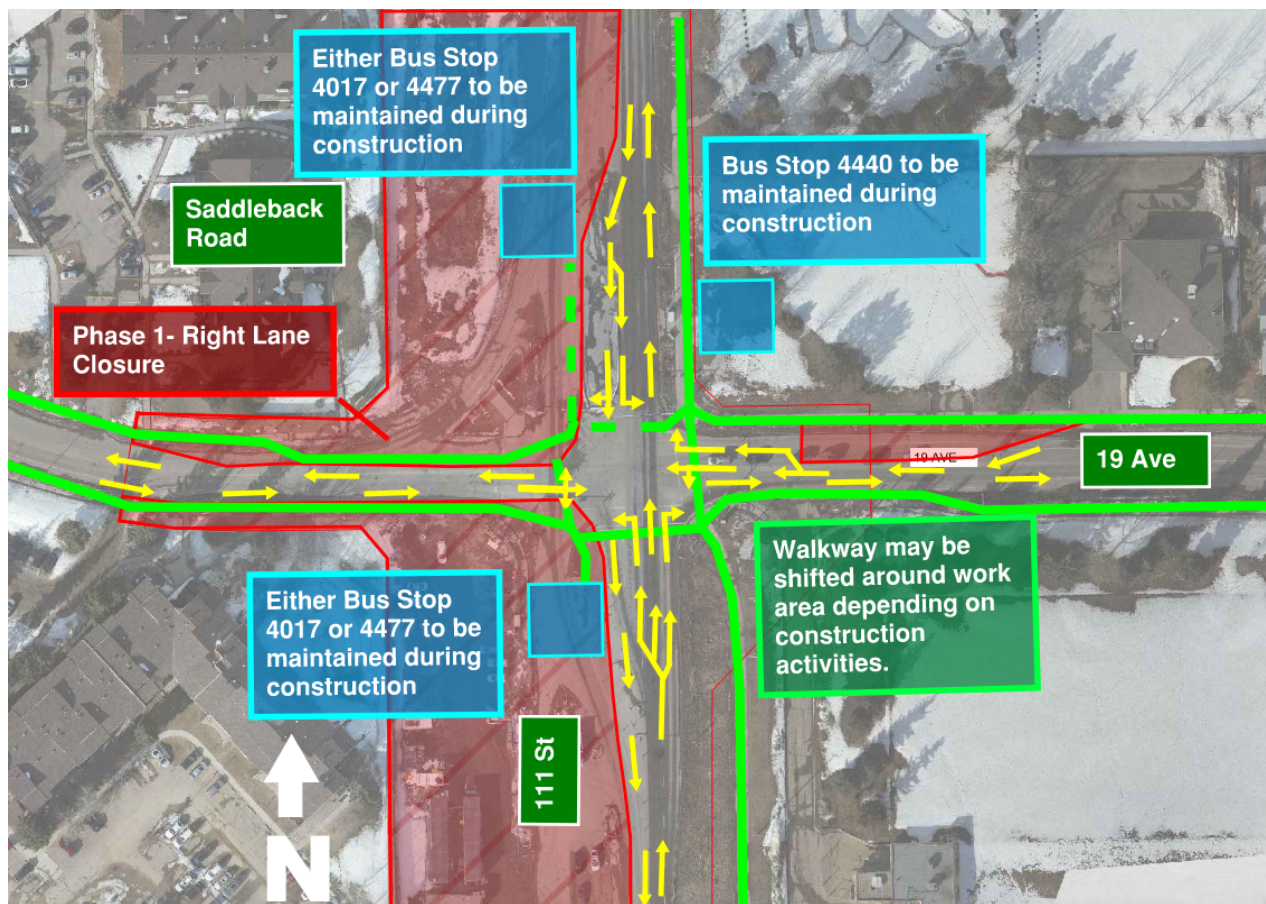

- The City and Ledcor are in regular communication with ambulance services, Edmonton Fire Rescue Services and the Edmonton Police Service, and emergency services are proactively informed of all construction impacts and closures.
 - To ensure public safety, emergency services use established protocols and mitigation measures when navigating lane closures and construction zones across the city.

Critical work must also continue along 111 Street near Blackmud Creek, and **111 Street is anticipated to remain one lane southbound and one lane northbound until fall 2026.**

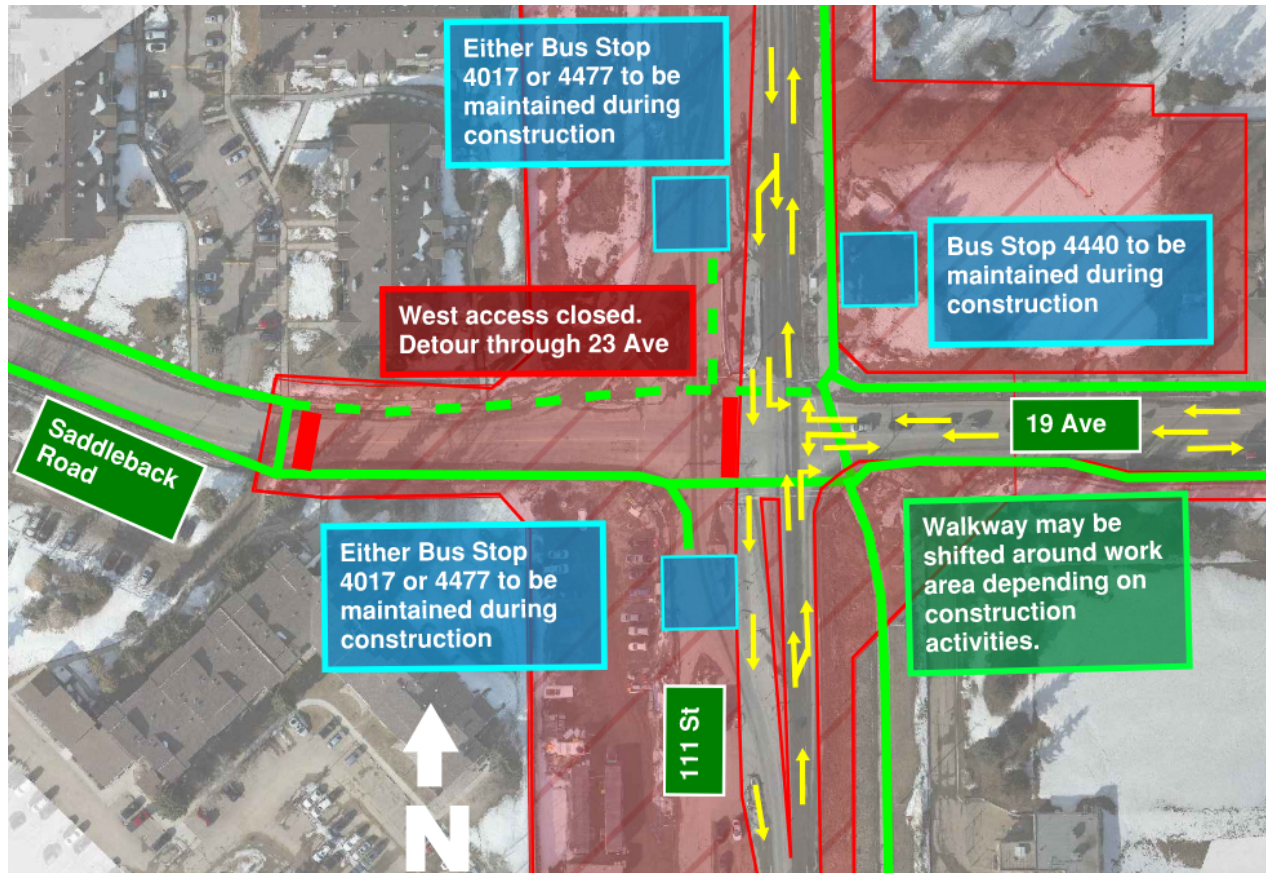

We recognize lane reductions on 111 Street, along with the full closures of Saddleback Road west and 9 Avenue west, will be very challenging for residents, especially those entering and exiting Skyrattler and Twin Brooks.

We thank nearby residents for their patience and understanding as we complete this important work. Please refer to the maps below for details.

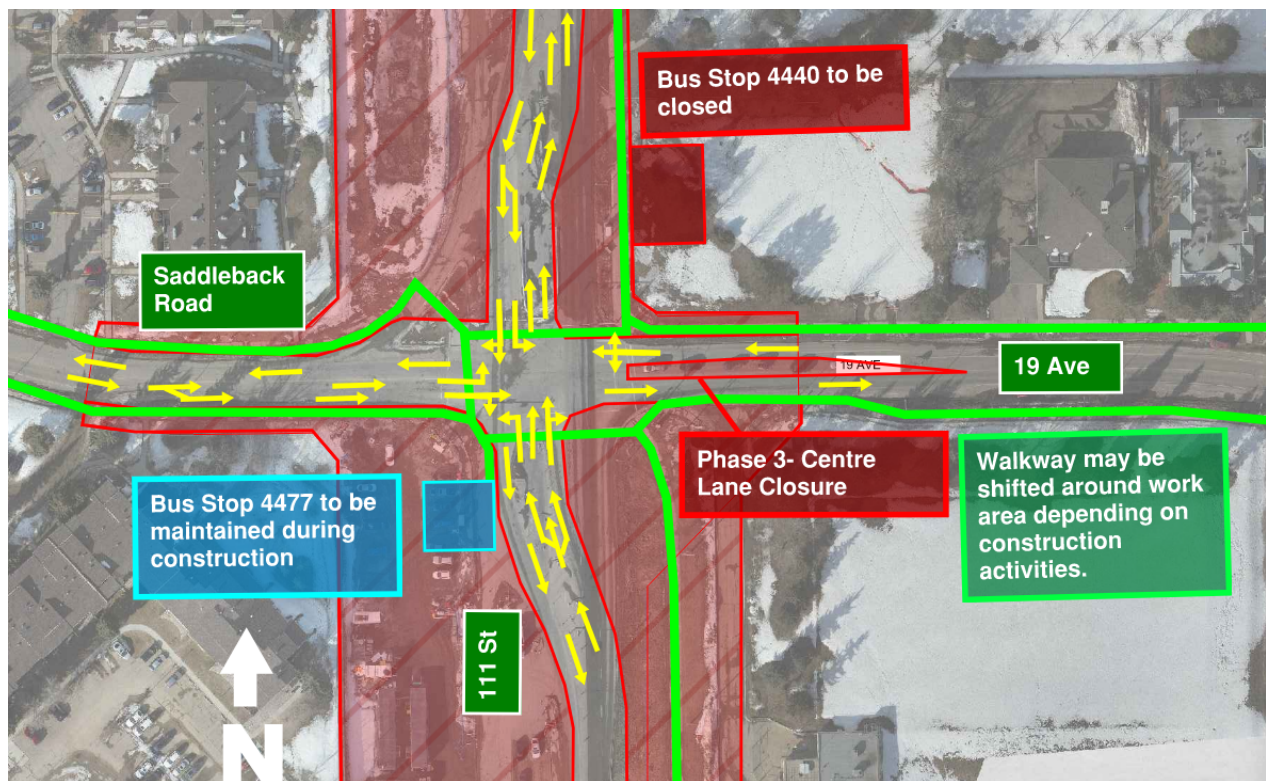

Map 1: Westbound Lane Closure on Saddleback Road West - Phase 1 (starting on/around July 18 for about one month)

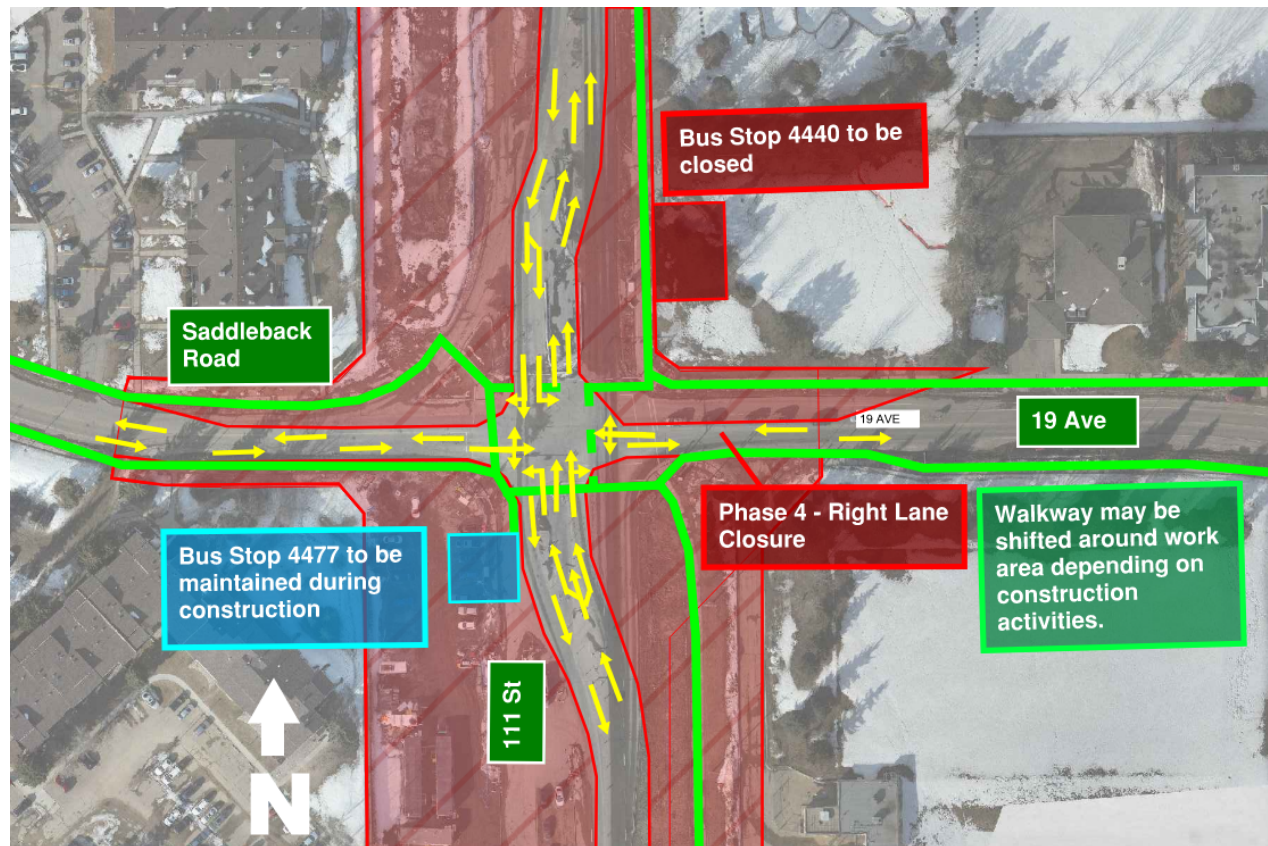

Map 2: Full Closure of Saddleback Road West - Phase 2 (anticipated to start sometime in August)

Map 3: Westbound Centre Lane Closure of 19 Avenue East - Phase 3

Map 4: Westbound Right Lane Closure of 19 Avenue East - Phase 4

What to Expect

Traffic Impacts

- During Phase 2 of the closure, motorists will be unable to use Saddleback Road west to access or exit onto 111 Street. Motorists will be detoured to 23 Avenue.
- The speed limit on 111 Street approaching the work zones continues to be reduced to 40 km/h in both directions.

Pedestrian Detour

- Pedestrians and cyclists travelling north-south can use the crosswalk on the east side of 111 Street at Saddleback Road/19 Avenue. At least two of the four crosswalks will be maintained at the Saddleback Road/19 Avenue intersection, with proper detour signage.
- Walkways may be shifted around work areas depending on construction. Fencing, barriers and ramps will be used to ensure pedestrians and cyclists can travel safely through the work zone.

Other Impacts

- Efforts will be made to minimize noise, vibration and dust. Mitigation measures will be implemented to monitor and reduce these impacts. Ledcor is committed to complying with all City of Edmonton bylaws* and regulations and will obtain an overnight permit to allow work during overnight hours. *City of Edmonton Bylaw C14600.
