

CHANGING WEATHER EXTREMES

Climate change is expected to produce more frequent and intense weather events. So how do you prepare?

AN AIRTIGHT HOME

Improved weatherstripping helps to keep smoke from wildfires out. It's also more energy efficient.

THE RIGHT SIDING

Consider more fire resistant materials like stucco, cement board or brick.

EMERGENCY PREPAREDNESS KIT

A good emergency kit includes a radio, batteries, flashlight, first aid kit, non-perishable food, and drinking water, enough for 72 hours. Don't forget to prepare for your pets, too.
