

West Garden

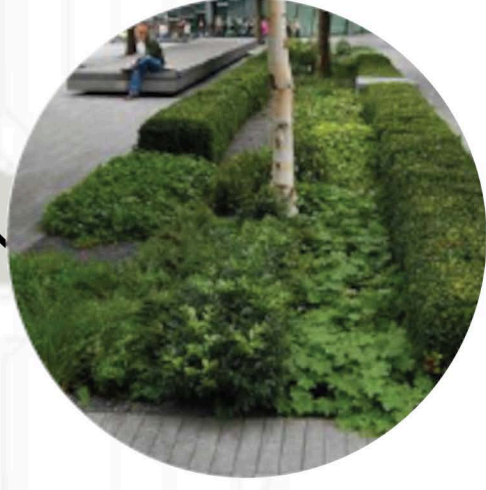

The West Garden containing the Holodomor Monument also requires rehabilitation of the grass surface. This is to improve accessibility, improve safety and provide a alternative surface to reduce the impact from pedestrian traffic. Crime Prevention Through Environmental Design requirements have been incorporated in this area. The finishes and approach is similar to the East Garden

East Garden

Both the North and South Portions of the East Garden will feature significant planting regions around each tree and wooden bench seating throughout. The design of the planting areas and seating are meant to match the angular paving geometry that will be found throughout the project. Wood decking will provide the base surface throughout the East Garden
