

Permit Revisions Managed Online

If a proposed development changes after a permit has been issued the permit must be revised. Permit revision requests for development and building permits can be submitted online. Common types of revisions include, but are not limited to truss/joist layouts changes, elevation and layout changes, changes in engineering, added floors or mezzanines and revised exiting.

Some changes after construction on a Part 9 project begins may be made without engaging in the Permit Revision process. For details, review [Part 9 Project Product Swap and Plan Revision Procedure](#).

To submit a permit revision request after a permit has been issued, open the permit project from the self service dashboard and use the Request Revision button next to the permit listed in the project. You will be able to describe the changes and submit revised plans and documents.

The revision details will then be reviewed by a Development Officer and/or Safety Codes Officer and you'll be able to see the status of the revision review online.

Please note: permit revisions (after the permit has been issued) can be requested online for:

- Commercial Development and Building Permits applied for after July 2019,
- New Home Development and Building Permits applied for after February 2020
- Home Improvement Permits applied for after December 2022.

If you don't see the Request Revision button next to your permit in the dashboard, you'll need to request the revision by email to the file contact.

If you have any questions or feedback, please contact eservices@edmonton.ca.
